

SGI Enhanced Global Income ETF

GINX

Why invest in GINX?

Income Generation

Designed for investors looking to experience income derived from two distinct sets of holdings: 1) dividends that are generated from a diversified portfolio of global equities that historically generate attractive dividends, and 2) an enhanced income component derived from an ultra-short-term options strategy that seeks to provide additional daily income.

Diversification

Invests across a diversified portfolio of global companies that exhibit attractive growth characteristics—growth potential and quality of earnings—with an emphasis on current dividends, while seeking downside protection through our Managed Risk Approach™.

Experienced Investment Team

SGI Portfolio Managers have deep expertise in multi-asset income investing, including asset allocation, tactical positioning, and rigorous research.

Risk Management

Managed Risk Approach employs diligent company review and dynamic hedging through put and call options management that seeks to enhance the amount of income the portfolio receives.

ISIN | US74933W2623

Gross Expense Ratio | 0.98%

Seeking Higher Income from Equity Exposure

The SGI Enhanced Global Income ETF (GINX) seeks to generate current income and enhanced yield by actively investing in global companies (primarily large- and mid-cap) that currently offer dividend income. Emphasizing reduced volatility through disciplined value investment, our goal is to outperform and receive higher dividend yields when compared to the underlying indices.

GINX also integrates an innovative, actively traded put and call options strategy designed to utilize the liquidity and volume of the S&P 500 Index or other broad benchmark indices to produce additional income with a dedicated emphasis on risk control. We believe this gives GINX the increased potential of providing a greater enhanced total yield compared to portfolios that only capture equity dividends.

Managed Risk Approach™

Managing downside risk is at the core of everything we do. We are driven to find, assess and mitigate potential risks in individual securities, systemically in companies, and across combinations of companies.

We are active managers; our portfolios are designed to help investors flourish in rising markets. But, it's our critical focus on the downside that has historically proven key to pursuing investors' long-term goals.

Summit Global Investments, Adviser

SGI is an SEC-registered investment advisor headquartered in Salt Lake City, Utah, with offices in San Francisco, CA and Boise, ID. The firm serves institutional and individual investors, Registered Investment Advisors, and Family Offices. It is dedicated to creating customized investment solutions and strategies for its clients.

IMPORTANT INFORMATION

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company and may be obtained by calling (888) 251-4847 or visit our website at sgiam.com. Read the prospectus or summary prospectus carefully before investing.

Investing involves risk, including possible loss of principal. The Fund is a newly organized, diversified management investment company with no operating history. To the extent the Fund invests in Underlying Funds that invest in fixed income securities, the Fund will be subject to fixed income securities risks. While fixed income securities normally fluctuate less in price than stocks, there have been extended periods of increases in interest rates that have caused significant declines in fixed income securities prices. To the extent that a Fund invests in Underlying Funds that invest in high-yield securities and unrated securities of similar credit quality (commonly known as "junk bonds"), the Fund may be subject to greater levels of interest rate and credit risk than funds that do not invest in such securities. Small-cap companies that the Underlying Funds may invest in may be more volatile than, and not as readily marketable as, those of larger companies. Small companies may also have limited product lines, markets or financial resources and may be dependent on relatively small or inexperienced management groups. Underlying Funds that invest in foreign securities may be subject to special risks, including, but not limited to, currency exchange rate volatility, political, social or economic instability, less publicly available information, less stringent investor protections and differences in taxation, auditing and other financial practices. Investments in emerging market securities by Underlying Funds are subject to higher risks than those in developed countries because there is greater uncertainty in less established markets and economies. To the extent the Fund invests in Underlying Funds that focus their investments in a particular industry or sector, the Fund's shares may be more volatile and fluctuate more than shares of a fund investing in a broader range of securities. A company issuing dividend-paying securities may fail and have to decrease or eliminate its dividend. In such an event, the Fund may not only lose the dividend payout but the stock price of the company may fall.

The Fund's investments in derivative instruments including options, forward currency exchange contracts, swaps and futures, which may be leveraged, may result in losses. Investments in derivative instruments may result in losses exceeding the amounts invested. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with investments in more traditional securities and instruments.

Diversification does not eliminate the risk of experiencing investment loss.

Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the funds. Brokerage commissions will reduce returns.
